CENTER FOR MUNICIPAL RESEARCH & INNOVATION
PRESENTS

Disruptive Technology: Impacts on Local Government

Wednesday, August 15 ■ 8:30 a.m. - 1:00 p.m. ■ The Diplomat Beach Resort, Hollywood

New technologies are rapidly replacing established methods of service delivery and municipal governance. Innovations such as **autonomous vehicles**, **broadband wifi** and the **sharing economy** are impacting the way residents and visitors interact with the city. In response, local leaders are seeking ways to embrace these technologies while also balancing property rights and preserving the unique character of their individual communities. In some areas, this has become contentious as corporate interests seek to gain market advantage by circumventing **local control** through statewide regulation. Join us as we discuss local and nationwide trends, dive deep into the issue of **home-sharing** and **short-term rentals**, present options and tools cities can use to work *with* disruptive technology companies, and explore the effects – both positive and negative – these technologies are having on our communities.

This research symposium is designed for city managers, innovation officers, municipal attorneys and elected leaders to better understand and cope with the impacts **disruptive technologies** have on municipal government. The event is free for League members and research partners, but pre-registration is required.
